

Berlin capacitor energy storage power station

This is a list of energy storage power plants worldwide, other than pumped hydro storage. Many individual energy storage plants augment electrical grids by capturing excess electrical energy during periods of low demand and storing it in other forms until needed on an electrical grid. The energy is later converted back to its electrical form and returned to the grid as needed.

We turn our material-based advantage into high-performance energy storage to accelerate electrification in the transportation, grid, industry, and automotive sectors.
