

Should you pay cash for solar panels?

When you pay cash for solar panels, you own the system completely and get all the financial benefits, including electricity savings, tax credits, and increased home value. The upfront cost is steep - typically \$15,000 to \$30,000 depending on system size - but most homeowners break even in 7-10 years.

How does community solar work?

Community solar lets you go solar without installing anything on your property. Instead, you join a solar project in your area and get credits on your electric bill for the power it makes. In this guide, you'll find everything you need to know about how community solar works, what it costs, and whether it's right for your home.

Should you buy a Solar System Outright?

Buying a solar system outright gives you the highest long-term return. When you pay cash for solar panels, you own the system completely and get all the financial benefits, including electricity savings, tax credits, and increased home value.

What is community solar?

Community solar - also called shared solar or solar gardens - means local solar panels that many people in the community share. Unlike rooftop solar that serves just one home, these solar farms are usually built on open land and can power hundreds or thousands of homes.
