

The government incentives have also contributed to the curtailment of solar energy, as many of the solar projects have been built in northern and western regions of China where there is a low demand for ...

China is rapidly scaling up its solar and wind energy infrastructure, accounting for nearly three-quarters of all utility-scale projects currently under construction worldwide, according to a...

In recent years, outdoor solar panels have emerged as a vital component of China's renewable energy landscape. As the country strives to reduce its carbon footprint and ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's bright sunshine, cold temperatures and...

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

The continent imported 60% more solar panels from China over the past year, though a lack of reliable installation data makes it a challenge to track the true pace of deployment.

OverviewGovernment incentivesHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryThe China Development Bank provided \$20 billion of financing to domestic solar manufacturers in 2010. In 2011, new feed-in tariffs were promised to potential solar power developers to help drive investments and growth in the solar power market. The government of Qinghai province offered solar projects that were operational before 30 September, 1.15 yuan (\$0.18) for each kWh they produced in May 2011. The National Development and Reform Commission offered same-priced subsidies to potential solar powe...

China's solar and wind operating capacity has soared to 1.4 TW and now accounts for 44% of the world's operating utility-scale solar and wind capacity, more than the combined total of the European ...

China is leading the world in new solar and wind installations, and saw a decline in carbon emissions for the first time in May.

Photovoltaic (PV) technologies dominate China's solar industry, with roughly 99% of China's solar power capacity. Chinese PV manufacturing accounts for the vast majority of global PV production.
