

How much does a solar panel cost?

Note: Costs are expressed in constant 2024 US\$ per watt. Global estimates are used before 2010; European market benchmarks thereafter due to limited data availability. Solar photovoltaic module prices refer to the cost of the solar panel itself, and do not include installation or other system components.

How much does a residential solar system cost?

Using these numbers, an average-sized 8-kilowatt residential solar system would cost between \$21,900 - \$26,400. Regional pricing differences, the system size, local installation costs, inclusion of home battery backup, and local incentives are other factors which affect the final cost.

Do solar panels save money?

In 10 years, your utility rate might be 50% higher than it is today, and a high-efficiency solar panel might produce 5% more power than a higher degradation one. This translates into tens of dollars of extra savings every month. And those rates compound as the solar savings keep accruing. How can I lower the cost of solar panels?

Are solar panels expensive?

No, solar panels in the USA are not considered expensive. On average, a 6.6 kW solar panel system typically costs around \$16,000, not considering government incentives and rebates. Solar panel costs in the US usually range from \$4,500 to \$36,000, or \$1.00-\$3.60 per watt (W).

Use our guide on how much solar panels cost based on the most important factors like home size, type, energy usage, and more to see what it will cost you to go solar.

Solar photovoltaic module prices refer to the cost of the solar panel itself, and do not include installation or other system components. Prices are compiled from three sources: Nemet ...

Learn how much solar panels cost in 2025 based on system size, location, and incentives. Find out how to calculate your solar panel cost and savings with a calc...

Solar panels cost an average of \$3.03 per watt, but costs can vary with location, your installer, and how you pay.
