

Looking ahead, Libya's energy sector must balance its rich oil legacy with a progressive embrace of renewable resources. By implementing rigorous reforms, investing in education, and ...

Libya ranked in the top 10 countries for global proved oil reserves.¹⁶ About 95% of Libya's recoverable reserves are located in the onshore Sirte Basin in the northeast and Murzuq Basin in the southwest.

Energy transition, net-zero goals, and climate change are important discussions that should be had alongside energy security by any oil and gas-rich country. Libya is rich in oil and gas ...

Zueitina Oil Company's engagement with Ryder Scott reflects Libya's quiet move toward long-term energy strategy, technical governance, and stronger control over its oil assets.

This strategic event is part of the joint efforts between national and international partners to advance Libya's transition toward a sustainable and inclusive energy future.

Rising Western and Turkish energy investments signal Libya's return to global oil markets. Despite holding one of Africa's largest oil reserves, Libya stands out as a country unable to ...

The central question is no longer whether Libya will pursue renewable energy, but whether the transition can be institutionalized within a governance system still shaped by fragmentation and ...

For Libya's policymakers, the challenge is to strike a balance. Oil and gas will continue to provide revenue and jobs, but investment in renewables and efficiency will shape future resilience.

Gas monetization is emerging as a central pillar of Libya's energy strategy. With gas production expected to reach 700-750 million standard cubic feet per day, Libya is well positioned to ...

After facing huge hurdles in oil and gas production, Libya is now striving to develop its renewable energy capacity and diversify its energy mix to establish greater energy security.
