

This webpage includes information from first responder and industry guidance as well as background information on battery energy storage systems (challenges & fires), BESS installation ...

A report released Friday by a clean-energy trade group spells out best practices for safe use of large-scale battery energy storage systems following a major fire at a battery facility...

Firefighters were on the scene for 15 days, battling to contain the blaze. Learn about the incident, the risks involved, and what this means for the energy storage industry.

On September 5th, a fire broke out at the Escondido Battery Energy Storage System (BESS) in California, raising serious concerns about the safety of large-scale energy storage projects.

This guide serves as a resource for emergency responders with regards to safety surrounding lithium ion Energy Storage Systems (ESS). Each manufacturer has specific response ...

A massive fire broke out at a battery energy storage facility in Peoria, Arizona, earlier this month, requiring a large-scale response from multiple area fire departments.

Mandatory evacuation orders were issued by local authorities in Escondido, California, after a fire broke out at a battery energy storage system (BESS) facility.

Published by the National Fire Protection Association (NFPA), this standard provides comprehensive requirements for the safe installation of stationary energy storage systems, including ...

The report is a culmination of a two-year research project examining the characteristics of fires resulting from the overheating of lithium-ion battery energy storage systems (ESS) within ...

On the evening of September 24, local time, a shocking Tesla Megapack energy storage system fire broke out at the Townsite Solar and Storage facility in Boulder City, Nevada.
