

Wind energy in Europe: 2024 Statistics and the outlook for 2025-2030 Reports October 2024 Wind Turbine Orders Monitoring Q3 2024 Reports September 2024 Latest wind energy data for Europe: ...

Stringent height restrictions in the French market limit the power ratings of installed turbines, leading to one of the lowest averages of newly installed turbine power ratings in Europe and limiting the ...

Almost 10 years later the world's first offshore wind farm was erected off the coast of Denmark. The industry has come a long way since then. The total wind power capacity in Europe has...

The majority of wind installations deployed in the EU are provided by the domestic wind manufacturing sector, with the main European manufacturers accounting for 85 % of the EU wind energy market (94 ...

In 2024, wind farms in the EU generated 475 TWh of electricity supplying 19% of the EU-27's total electricity consumption, with Denmark relying on wind for 56% of its power, Ireland for 33%, ...

This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more about Ember's methodology in this document.

This autumn update outlines the latest data for wind energy in Europe and our expectations for the rest of the decade. Europe now has 291 GW of wind power capacity, with 254 ...

Wind energy generated 19% of total electricity in the EU, with a total production of 475 TWh, roughly twice Spain's annual electricity consumption. Denmark and Ireland had the highest ...

The European Green Deal has delivered a deep and rapid transformation of the EU power sector. Driven by expanding wind and solar power, renewables have risen from a share of ...

In 2017, a total of 15,680 MW of wind power was installed, representing 55% of all new power capacity, and the wind power generated 336 TWh of electricity, enough to supply 11.6% of the EU's electricity ...
