

To better understand the structural behavior and prevent potential failure, this study presents a simplified analytical model for the design of double-layer flexible cable photovoltaic ...

The flexible photovoltaic support system can realize the large span of the suspension cable structure, reducing the amount of support steel and the number of support foundations, and greatly lowering ...

Since 2000, flexible support photovoltaic module structure systems have been widely used because of their advantages such as short construction period, large span, good economic ...

The suspension cable structure with small sag-span ratio (less than $1/30$) is adopted in the flexible photovoltaic support, and it has strong geometric nonlinearity.

To improve the span and stiffness and widen the application scene of the flexible photovoltaic support system, a new type of three-dimensional cable-truss flexible photovoltaic support system is proposed ...

The contributions of this paper are as follows. A comprehensive field modal testing of the flexible PV support structure is conducted, obtaining its high-order modal parameters in the first time ...

It is a photovoltaic support system supported by suspension structure. The suspension structure consists of a series of tensioned cables as the main load-bearing components.

These flexible PV supports, characterized by their heightened sensitivity to wind loading, necessitate a thorough analysis of their static and dynamic responses.

This article provides a detailed comparison of the single-layer cable suspension structure and the double-layer cable truss structure in flexible solar mounting system, outlining their ...
