

Generators of solar power plants in Ukraine

In 2019, changes were announced to the Ukrainian energy market operations that have significant impacts on the growth and operation of large scale solar facilities in Ukraine.

Since the beginning of the full-scale Russian invasion and targeted attacks on the energy sector, decentralised solar energy and residential solar panel installation securing the electricity supply have contributed greatly to ...

Amid Russia's continued attacks on Ukraine's energy infrastructure, solar power has the potential to fill a vital energy gap, contributing to the creation of a more reliable, decentralised and resilient ...

Data and information about Solar power plants and their location plotted on an interactive map of Ukraine.

Since November 2025, UNICEF has delivered 106 mid and large capacity generators across Ukraine to support water utilities and district heating companies. An additional 149 generators of varied ...

Wind farms and solar projects are already changing how Ukraine generates electricity. This guide explores eight groundbreaking renewable energy projects across Ukraine. You'll discover how solar panels and wind ...

Since Russia's full-scale invasion in 2022, Ukraine's energy infrastructure has been under systematic assault. Russian missile, drone, and sabotage attacks have targeted power plants, substations, ...

This support will help Ukraine procure a range of energy equipment, including power units, heat blowers and spare parts for repairing damaged facilities. Kyiv Mayor Vitali Klitschko reported that a shipment ...

Adding solar power to a diesel-generator-powered microgrid can significantly reduce fuel use and extend its operation without refueling. For example, a 2021 NREL study found that pairing solar generation ...

Persistent power cuts due to Russian attacks on generation and transmission infrastructure continue to drive demand for distributed solar PV, as consumers intend to partly produce their consumed electricity themselves.
