What is a rooftop solar system?

A rooftop solar system consists of solar photovoltaic (PV) panels mounted on the roof of a building. These panels absorb sunlight and convert it into electricity, reducing or even eliminating your dependence on traditional power sources.

How does a rooftop solar system work?

Once permits are in place, the actual Rooftop Solar Installation begins. Mounting structures are fixed to the roof, solar panels are installed, and all components are connected. Wiring is done carefully, ensuring safety and reliability, and then the system is connected to your home's electrical panel.

Is your roof fit for a solar panel system?

Not every roof is fit to host a solar panel system. A flat angle or partially shaded, inadequate space - in such scenarios, efficiency becomes poor. Hence, it requires proper analysis before final installation from an experienced solar installer by conducting site inspections, and rooftop evaluation for efficient production.
