

Currently, Ireland relies heavily on imported natural gas. Approximately 80% of our supply is delivered from Great Britain. Ireland is the only European country with no domestic gas storage, no long-term ...

Mr Ryan said going the commercial route with gas storage was likely to lead to increased demand for the fossil fuel and fail to enhance security.

The NSTA has turned down the company's application for a gas storage license, citing changed circumstances, according to an Aug. 14 EnergyPathways news release.

Irish developer dCarbonX plans to build a new gas storage facility in the East Irish Sea that would boost UK gas storage capacity by 50%, the company said on Monday.

MGP's Best Practice Guide for transmission, storage, LNG terminals and distribution

The Irish Government has approved development of a temporary emergency facility for importing and storing LNG, it said on Tuesday.

The floating storage and regasification unit would be moored at the proposed terminal/jetty on a long-term basis and LNG would be transported to the terminal on LNG carrier ships.

Project (hereafter referred to as the Whole Project). The Whole Project comprises two constituent parts: the Mooir Vannin Generation Project within the Isle of Man jurisdiction, promoted ...

The network planning team safeguards both the high-pressure transmission and low-pressure distribution gas network against capacity constraints in the short, medium and long-term, ensuring ...

A proposed storage development in the Irish Sea has the potential to double the UK's limited natural gas storage capacity, while also being designed to accommodate future low-carbon ...
