

To date, energy storage in Massachusetts has been primarily limited to pumped hydro storage in Northwest Massachusetts that is provided as bulk energy to the ISO-NE.

Massachusetts has issued a Request for Proposals (RFP) to solicit bids for long-term contracts for up to 1500 MW of energy storage projects.

Massachusetts is moving toward its goal of procuring 5,000MW of energy storage by 2030.

Massachusetts is accelerating toward 5,000 MW of energy storage by 2030 with a robust mix of incentives, grants, and market programs. This guide breaks down the most impactful ...

The new Section 83E directs Massachusetts utilities to enter into long-term contracts for approximately 5,000 MW of energy storage systems by July 31, 2030, to be identified through a ...

The system adopts lithium iron phosphate battery technology, with grid-connected energy storage converter, intelligent control through energy management system (EMS).

Energy storage is a significant strategic opportunity for Massachusetts. It can improve grid operations, reduce energy costs, provide backup power through storms, and benefit the local economy.

This study offered a comprehensive assessment of the energy storage market in the Commonwealth and identified energy storage deployment as a critical and cost-effective strategy to ...

It requires investor-owned utilities to secure 5,000 megawatts (MW) of storage by 2030. This includes 3,500 MW of mid-duration, 750 MW of long-duration, and another 750 MW for multi ...
