

The agreement, signed with Tenaga Nasional Berhad, Malaysia's national utility, will see a Masdar-led consortium deliver what is set to become the largest floating solar plant in Southeast ...

Malaysian utility company Tenaga Nasional Berhad has officially launched a floating solar pilot project, which could help unlock 2.2GW of generation capacity. The Hybrid Hydro Floating...

Abu Dhabi-based Masdar has signed a power purchase agreement (PPA) for a 200 MW floating solar project in Malaysia, marking its first project in the country under the fifth large-scale solar...

Malaysia's Ministry of Energy Transition and Water (PETRA) has approved 13 large-scale solar projects, including one of the country's largest floating solar plants, under the LSS PETRA 5+ ...

With an expected operational date by 2027, it will play a crucial role in Malaysia's efforts to expand its floating solar capacity and meet its goal of reducing greenhouse gas emissions by 45% ...

(DTU) is approved for Initial Operations Date (IOD) as of 16 November 2024. The DTU site consists of two interconnected floati. g solar plants, DTU 1 and DTU 2, with a combined 98MWdc ...

The initiative involves installing floating solar panels on the Kenyir Reservoir, Southeast Asia's largest man-made lake. This approach utilizes existing hydropower infrastructure to generate ...

In February 2024, Tenaga Nasional Berhad announced plans to develop 2.5GW of hybrid hydro-floating solar projects. This initiative combines solar and hydroelectric power to optimise ...

The primary objectives of this project are to harness the synergy between solar and hydroelectric power, optimise resource utilisation, and contribute to Malaysia's renewable energy targets. The HHFS ...

Floating solar is emerging as a strategic solution to achieve Malaysia's push to reach 70 per cent renewable energy capacity by 2050, amid land scarcity, environmental sensitivities, and grid ...
