This data repository for UC San Diego microgrid data is being released for use by other researchers in microgrid optimization studies. It consists of two parts: data files and python scripts.

The dataset includes measurements of voltage, power, frequency and temperature of different sensors and devices installed at the microgrid. This dataset contains 17 features and was collected over the ...

UNSW-MG24 is a comprehensive Intrusion Detection System (IDS) dataset specifically designed for communications of realistic microgrid systems.

To enable modelling of the actual microgrid performance of a research environment, we present a multiyear dataset of a microgrid with solar arrays and a battery. The main energy datasets ...

We compiled, quality controlled, and released publicly a comprehensive power dataset of parts of the University of California, San Diego microgrid.

It contains measurements of voltage, current, power, and energy for microgrid's components. This dataset consist of 18 features and was collected over the past 15 months. The dataset is valuable for ...

This is an integrated district dataset which is main from Chong Aih's MSc project, accessible on Github [1]. This open dataset contains hourly load, market price and PV generation data of a microgrid in US.

The Onsite Energy Installation Database covers onsite energy installations at industrial facilities and other large energy user sites in the United States. It includes all data from DOE's previous Combined ...
