

National Grid is accelerating the connection of up to 20GW of clean energy projects to its electricity transmission and distribution networks in England and Wales as part of ongoing ...

National Grid will speed up the connection of up to 20GW of clean energy projects to its electricity transmission and distribution networks in England and Wales.

In a groundbreaking move, National Grid has unveiled its ambitious plan to accelerate grid connections for a staggering 20GW of "shovel-ready" clean energy projects across England and Wales.

The UK's National Grid is speeding up the connection of up to 20GW of clean energy projects to its electricity transmission and distribution networks across England and Wales.

National Grid said the accelerated 20GW of projects equates to the capacity of six Hinkley Point C nuclear power stations. Developers looking to connect renewable energy projects have previously ...

According to National Grid Electricity System Operator (ESO), since October 2022 the transmission connections queue has grown by more than 275GW, and has been growing at an ...
