

New power generation device offshore solar energy

HelioSea is an innovative offshore solar energy concept that combines a dual-axis tracking system and a tension leg platform (TLP) to maximize electricity generation and ensure structural ...

Mocean is now preparing to deploy its Blue Star wave energy device, said to be designed for long-term operation and scalability across various offshore applications. Under the terms of the MoU, Mocean ...

OPT's PowerBuoy™ combines wave, wind, and solar energy to deliver consistent, renewable power for offshore and remote maritime operations.

At SolarDuck, we are building on our Dutch-Norwegian roots and pioneering the future of renewable energy by harnessing the power of offshore floating solar technology.

By merging Mocean's wave energy converters with SolarDuck's floating solar platforms, the duo aims to deliver reliable, low-carbon power for offshore assets. Think of it as a plug-and-play ...

Developed by Scotland-based JCE Energy, the modular power system features over 100 offshore-grade solar panels, engineered to resist saltwater corrosion and endure harsh marine ...

Researchers from the Spanish University of Oviedo have developed a new offshore solar energy concept that combines a dual-axis tracking system and a tension leg platform (TLP), deemed ...

Ocean Power Technologies (OPT) recently completed the demonstration of its next-generation PowerBuoy, designed as an uninterruptable offshore power supply unit which exploits the energy of ...

RWE is now exploring the prospects for stand-alone and hybrid offshore solar photovoltaics to offer new ways to deliver cost competitive energy in our journey to Net Zero.

Building on the success of Blue X, Mocean Energy is now preparing to deploy its first commercial product, Blue Star - a next-generation wave energy device designed for long-term ...
