

Solar power delivered the lion's share of growth, meeting 83% of the increase in electricity demand. It has now been the largest source of new electricity globally for three years in a row.

Shanghai has approved the Fengxian 1# offshore photovoltaic project, the first commercial-scale solar-wind hybrid of its kind in China. The move marks a major step forward in the ...

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine

The increased power capacity would mark a major milestone in the country's long-standing effort to build a cleaner power system.

China's total installed power capacity is forecast to reach about 4.3 terawatts by the end of 2026 as China expects 300 GW to come from primarily wind and solar.

Solar power became the most affordable energy source between 2021 and 2025, with costs dropping below coal and natural gas in most regions.

This data-driven research on 3050+ solar energy startups and scaleups highlights advancements in off-grid solar energy, decentralized solar power, photovoltaics, perovskite solar ...

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027. Almost 70 ...

Discover the most promising new power sources, from solar innovations to fusion energy, transforming the future of clean and sustainable power.
