

Norway is strategically enhancing its renewable energy landscape, focusing on integrating solar power with other green sources and modernizing its grid infrastructure to meet ...

Norway's solar market experienced a slowdown in 2025, particularly among residential installations. The outlook for 2026 looks more optimistic, thanks to policy reforms supporting larger...

This target encompasses both small-scale rooftop installations and large utility-scale solar power plants, though the share between them is undetermined. This article analyses current ...

In this article, the technical potential of solar power on buildings in Norway is assessed by estimating the available roof and wall area suitable for the installation of solar cells.

However, in our Energy Transition Outlook we find that solar PV is probably the only new power source in Norway able to add capacity in the coming years. Wind, hydropower or nuclear require extensive ...

Norway reached 373.0 MW of cumulative installed PV capacity spread across 20,216 solar plants at the end of April, according to new figures from the country's grid operator, Statnett, through...

Norway's residential solar market has experienced significant growth despite the country's northern latitude. By mid-2025, Norway reached 763 MW of cumulative solar capacity ...

The potential is large, but it will only be unlocked with favourable framework conditions. This article analyses how Norway's regulatory landscape for solar energy is changing rapidly.

Norway's rooftops may hold the key to a greener future. A new study reveals the country's buildings could generate vast amounts of solar power--enough to transform its energy landscape. ...

In regard to Norway, the country has been long known as a pioneer in zero-energy buildings. These structures feature zero net consumption of renewable energy, while energy-positive ...
