

Following the successful fabrication and analysis of standard Li-ion batteries employing the double-perovskite electrode, we analyzed $\text{Cs}_2\text{NaBiI}_6$ as a photoelectrode in a PHBAT using a ...

Here, the authors propose a device comprising of perovskite solar cells and aqueous zinc metal batteries connected via the sandwich joint electrode method.

One candidate proposed are organic-inorganic lead halide perovskites. These materials are known to be very promising and contribute to the fast development of perovskite solar cells ...

To address these limitations, we demonstrate a highly integrated photorechargeable system that combines perovskite solar cells with a solid-state zinc-ion hybrid capacitor using a ...

This review paper focuses on recent progress and comparative analysis of PBs using perovskite-based materials. The practical application of these batteries as dependable power ...

In this work, we explore a dual-functional modulation approach by sharing-using of ethyl viologen diiodide (EVI 2) both in perovskite solar cells (PSCs) and rechargeable batteries.

Achieving this potential will require us to overcome barriers related to stability and environmental compatibility, but if these concerns are addressed, perovskite-based technology holds ...

Originating as transformative entities in the field of solar cells, these perovskites have surpassed conventional boundaries. This comprehensive review embarks on a journey through the ...

According to proponents of this ‘wonder material’, perovskite panels promise to cheaply boost the energy generated by solar farms and rooftops, and could work far better than silicon panels...

Rivalling the double, triple, and quadruple junction solar cells mentioned above, are all-perovskite tandem cells with a max PCE of 31.9%, all-perovskite triple-junction cell reaching 33.1%, and the ...
