

Chinese PV module maker Longi has revealed that its proprietary hybrid interdigitated back contact (HIBC) crystalline silicon solar cell based on a full-size silicon wafer has achieved a ...

Photovoltaics is one of the fastly growing technology whose applications demand the exact knowledge of solar insolation, its components and their exact changing behaviour over days and even hours.

LONGi launched its mono-PERC modules in 2016, featuring integrated PERC technology on monocrystalline silicon and low light degradation, and its cell efficiency has increased from 21% to ...

LONGi announced two new global efficiency records at the Technology Innovation Session during the 2025 SNEC in Shanghai.

The conversion of sunlight, made up of particles called photons, into electrical energy by a solar cell is called the "photovoltaic effect" - hence why we refer to solar cells as "photovoltaic", or PV ...

According to authoritative certification by the European Solar Test Installation (ESTI), one of the world's leading photovoltaic (PV) calibration laboratories, this cell's photovoltaic conversion ...

According to the latest certification report from the Fraunhofer Institute for Solar Energy Systems ISE in Germany, the efficiency of the HPBC 2.0 module independently developed by LONGi ...

Photovoltaic technology lets you generate electricity from a renewable source: the sun. Unlike traditional methods of electricity generation, which often rely on fossil fuels, photovoltaics...

Photovoltaic (PV) technologies - more commonly known as solar panels - generate power using devices that absorb energy from sunlight and convert it into electrical energy through semiconducting ...

(Yicai) June 20 -- The M6 size wafer-level silicon-perovskite tandem solar cell that Chinese photovoltaic giant Longi Green Energy Technology unveiled at the Intersolar Europe 2024 exhibition in Munich ...

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for ...

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. ...

Photovoltaic systems work by utilizing solar cells to convert sunlight into electricity. These solar cells are made up of semiconductor materials, such as silicon, that absorb photons from ...

Longi Green Energy sets world record for solar module efficiency at 25.4% China's Longi Green Energy has set a new world record for crystalline silicon solar module efficiency with its ...

LONGi launches the first 700 W solar module with 25.9% efficiency and 259 W/m² power density, setting a new global benchmark in photovoltaic innovation. The company has introduced in ...

Photovoltaic (PV) devices generate electricity directly from sunlight via an electronic process that occurs naturally in certain types of material, called semiconductors.
