

During operation of the PV system, events may occur which can refer to one or several inverters or the Sunny Multigate. Events can be information, warnings or errors. All events are displayed in the ...

Solution: Check whether the power of solar panel has been overpower, decrease the parallel quantity of solar panels and then the controller can be start charging ...

In summary, identifying a broken solar controller is critical for maintaining a reliable solar energy system. By monitoring for error codes, checking battery statuses, inspecting connections, and ...

Find out what solar charge controller error codes mean and how to resolve them for MPPT and PWM systems.

Explore our guide to understand solar charge controller error codes. Get reliable solutions for troubleshooting & quickly fix any issues.

Recognizing these error codes is the first step in diagnosing issues with your solar charge controller. However, it's equally important to know how to troubleshoot these problems ...

The main screen has a section at the bottom (indicated in the images below) to indicate either the charge state if the controller is charging normally or fault information if the controller has entered a ...

Refer to the manufacturer's manual for specific error codes. Perform recommended corrective actions. Reset the controller and observe if the error persists.

This error is an indication that the PV-array configuration with regard to open-circuit voltage is critical for this charger. Check configuration, and if required, re-organise panels.
