

The invention relates to the technical field of photovoltaic module processing, in particular to series welding processing equipment and a welding method for a photovoltaic panel cell.

Description Our Tabber & Stringers weld solar cells to wire or ribbon in order to interconnect them electrically and create cell strings. These strings will be matrixed in the lay-up system immediately ...

Automatic shingled stringer is an automatic equipment to weld the solar cells into strings by curing the conductive adhesive and collect the welded strings (or transfer them directly to the later process).

The OSLB-1300 BC String Welding Machine introduced in this document is not only suitable for welding BC series battery strings but also compatible with various battery types such as ...

The solar photovoltaic automatic string welding machine adopts infrared roller hybrid welding technology, which can fully automatically weld traditional and double-sided batteries, as well ...

Designed to meet the demands of the renewable energy industry, this machine ensures high-quality and precise welding for connecting solar cells and creating durable solar strings.

The OSLB-1300 BC String Welding Machine introduced in this document is not only suitable for welding BC series battery strings but also compatible with various battery types such as Multi ...

Strategically LED by its brand name "LUOYUAN", with its excellent researching ability and unique understanding of photovoltaic equipment, the company keeps on developing the advanced ...

The OSLB-1300 BC String Welding Machine introduced in this document is not only suitable for welding BC series battery strings but also compatible with various battery types such as Multi-Busbar (MBB), ...

Tabber and stringer machine is to weld the solar cells one by one through copper ribbon, and the cells are connected in series to form a string. The entire welding process is fully automated.
