

The 2020 National Electrical Code (NEC) has introduced pivotal updates with profound implications for the solar installation industry, notably within section 705.11, governing load side and ...

Metallic support structures listed, labeled, and identified for bonding and grounding metal parts of PV systems can be used to bond PV equipment to the metal support structure.

Specifically, photovoltaic bracket corner codes are usually installed at the four corners of the bracket to connect and fix adjacent brackets, so as to ensure that photovoltaic panels can work ...

The safe and reliable installation of photovoltaic (PV) solar energy systems and their integration with the nation's electric grid requires timely development of the foundational codes and standards governing ...

As more homes and businesses are fitted with PV systems, it is important to understand that multiple codes and standards across different disciplines must be applied to ensure a safe ...

In this article, we'll dive deep into the ins and outs of building codes for solar panel installation, covering everything from structural integrity and electrical safety to fire prevention and ...

The Solar ABCs Expedited Permit Process simplifies the structural and electrical review of a small PV system projects and minimizes the need for detailed engineering studies and unnecessary delays. ...

As electrical related components and systems are a critical part of any solar energy system, those provisions of the National Electrical Code (NFPA 70) that are most directly related to solar energy ...

Download our free guide covering NEC purpose and development, code structure and organization, Article 690 for solar installations, and working with inspectors and AHJs.

In this edition of Code Corner, we're going to talk more about 2020 NEC section 705.11 (A) and (B), where you'll find the requirements for making PV connections on the supply side.
