

Collection of all known mods that add more planet proxies for use with the Real Solar Systems mod. It's finally time. This mod allows for the creation of real solar systems with moving ...

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is located in the Milky ...

Visualize orbits, relative positions and movements of the Solar System objects in an interactive 3D Solar System viewer and simulator.

Variations in solar activity have been proposed to play an important role in recent and past climate change.

We have provided a new fully consistent multi-proxy reconstruction of the solar activity over about nine millennia, based for the first time on a Bayesian approach.

The Solar System currently moves through a cloud of interstellar medium called the Local Cloud. The closest star to the Solar System, Proxima Centauri, is 269,000 AU (4.25 ly) away. Both are within the ...

NASA's Solar System Interactive (also known as the Orrery) is a live look at the solar system, its planets, moons, comets, and asteroids, as well as the real-time locations of dozens of NASA missions.

In this paper we show how to use images of the solar photospheric magnetic field to create a multicomponent proxy for solar activity that overcomes some of the limitations of existing proxies.

Online 3D simulation of the Solar System and night sky in real-time - the Sun, planets, dwarf planets, comets, stars and constellations

Explore the 3D world of the Solar System. Learn about past and future missions.
