

Is a Quiet Generator a good choice?

Quiet generators can reduce the amount of noise produced by a generator to such a degree that your ears are no longer at risk. However, there are smaller canopied generators that are effectively silent, producing only a quiet humming sound. If you don't want the sound of a generator disrupting your peace and quiet, they may be the best bet for you.

Is a super silent generator safe to use?

A super silent generator uses the canopy to reduce the noise level produced by up to 40 dB, so it's wise to ensure you're getting the noise reduction you need to make the generator safe to use, especially if it will be located in areas close to the public or staff working.

Are all canopied generators silent?

Not all canopied generators are necessarily silent. Most still produce some level of perceivable noise. However, they don't produce enough to cause long-term damage to your ears. Exposure to noises over 85dB can start to do damage to the tiny hair cells in your inner ears, which will lead to hearing loss over time.

How to avoid noise when using a soundproof generator?

The best way to avoid disturbance is by avoiding making any noise. Soundproof generator sets are machines that generate electricity and have been designed to operate silently without losing power.

Soundproof generator sets are widely used in applications where quiet operation is required: Hospitals, clinics and healthcare facilities, where the well-being of patients and staff is ...
