

Cheap Chinese-made solar, batteries and E.V.s have made the pivot to cleaner technologies possible for many large economies including Brazil, South Africa and even India, a ...

Despite abundant solar energy in China, the proportions of solar power generation have been keeping at a relatively low level before 2025, implying its high expansion potential in the future ...

At the same time, even larger additions of wind and solar capacity nudged down the share of coal in total power generation last year. Power from coal fell about 1% as growth in cleaner energy ...

When you're looking for the latest and most efficient Ruiqing Times Solar Power Generation for your PV project, our website offers a comprehensive selection of cutting-edge products designed to meet your ...

At the same time, even larger additions of wind and solar capacity nudged down the share of coal in total power generation last year. Power from coal fell about 1 per cent as growth in cleaner ...

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's...

The massive growth in wind and solar begs the question: Why is China still building coal power plants and, by most analyses, way more than it actually needs? The answer is complicated.

It set a goal to raise wind and solar capacity to 1,200 GW by 2030, and met the target six years early last year. Campaigners have urged Beijing to double the target. Grid access remains a...

China's installations of wind and solar in May are enough to generate as much electricity as Poland, as the world's second-biggest economy breaks further records with its rapid buildup of...

Solar and wind energy outpaced the growth in global electricity demand in the first half of 2025, as renewables overtook coal for the first time in history, a report by the energy think tank...
