

Sanaa increased renewable energy penetration

Saudi Arabia, aiming for a 50 percent green energy target by 2030, led the region with the highest value of renewable energy contracts awarded between 2012 and 2022, followed by Egypt ...

Saudi energy consumption rose 6.9% to 11.5 exajoules (EJ) in 2022, with oil accounting for 7.15 EJ, natural gas 4.33 EJ and renewables still a fraction of the energy consumed at 0.01 EJ, according to ...

Saudi Arabia is moving quickly to shift from fossil fuels to clean energy. Vision 2030 has set a bold goal: generate 50% of the Kingdom's electricity from renewables by 2030. This plan ...

This study provides a thorough and comprehensive analysis of the entire energy industry, spanning from the stage of production to consumption, incorporating sustainability factors into the ...

The 60-megawatt "Sana" solar power plant can produce clean energy sufficient to power approximately 13,780 homes annually, thereby reducing carbon dioxide emissions by 66,000 tons each year.

With abundant natural resources and strong policy momentum, Saudi Arabia is poised to become a global leader in clean energy. But navigating the transformation of the country's electricity ...

For the ASEAN region, the faster implementation of large hydropower projects and the introduction of more ambitious renewable energy goals and auction schemes has led to an upward forecast revision.

This transformation marks a major shift in Saudi Arabia's energy strategy, and it is positioning the country as a fast-emerging regional and global player in renewable energy.

To advance these projects, the Kingdom has adopted an emerging energy storage technology, exploring large-scale battery storage solutions to stabilize the grid and ensure a ...

Renewable energy could enhance electrical grid system in Yemen and generate the green energy for Yemeni rural areas to serve: education sector, lightening homes, and medical ...
