

The annual growth rate of the photovoltaic market is expected to be around 20% for 2025. However, a more rapid deployment of renewable energy is needed to stay on track for no more than 1.5 °C ...

Photovoltaic (PV) solar accounted for 56% of all new electricity-generating capacity additions in the first half of 2025, remaining the dominant form of new electricity-generating capacity ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...

This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more about Ember's methodology in this document.

SEIA's latest report highlights that 77% of all solar capacity installed in 2025 (year-to-date) has been in states won by President Trump, including 8 of the top 10 states for new installs. ...

- In Q1 2025, solar accounted for 10% of China's total energy generation. o Renewable sources continue to capture a larger share of China's growing electric capacity.

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information Administration's (EIA) latest release of its Electric ...

For solar PV, wind and bioenergy for power, deployment has been revised downwards. Solar PV accounts for over 70% of the absolute reduction, mainly from utility-scale projects, while offshore ...

Discover how much energy solar panels actually produce in 2025. Get real-world data, calculations, and factors affecting solar panel output. Free calculator included.
