

Opened in 2014, the largest solar power plant in the world, Ivanpah Solar Plant, located in the Mojave Desert in California, is believed to be responsible for at least 6,000 bird deaths each ...

As a result of the investigation, the Fish and Wildlife Service estimated that the number of birds killed by the Ivanpah Solar Power Plant is "6,000 birds per year."

Little work has been done specifically on bird mortality at solar farms, although it is known that millions of bats and large birds of every kind are killed every year by giant wind turbines and their ...

Solar installations like Ivanpah have added to this toll, with hundreds of thousands of birds killed over the past decade. Despite billions in subsidies, many green energy projects remain ...

The report, which calls the Ivanpah solar power plant a "megatrap," issues grave warnings about the threat that this relatively new technology poses to all species of birds.

A rare and unusual type of solar power plant that concentrates sunlight in California is accidentally killing up to 6,000 birds every year, with staff reporting that the birds keep flying into its ...

Federal wildlife investigators who visited the BrightSource Energy plant last year and watched as birds burned and fell, reporting an average of one "streamer" every two minutes, are ...

The rapid expansion of utility-scale solar facilities has raised questions about their environmental impact, particularly concerning avian wildlife. The risk to bird populations depends ...

A solar-power generating station in central California is killing birds as they catch fire in the reflection of light from its massive array of mirrors, leading to concerns about the "Lake Effect".

According to documents the plant's owners filed with the California Energy Commission a total of thirty dead birds were found at the Ivanpah Solar Electric Generating System in September, ...
