

Based on an average scenario, Romania will reach 24 GW installed in photovoltaics - over three times more than now - by 2030, becoming the sixth fastest-growing market out of the top 10.

Solar PV accounted for the entire Romania solar energy market share in 2025, underscoring the absence of CSP due to modest direct normal irradiance and higher capital intensity. ...

Romania added 2.2 GW of solar in 2025, according to figures from the Romanian Photovoltaic Industry Association (RPIA). The result marks a third consecutive year of growth in ...

Romania had nearly 290,000 prosumers by the end of November, with a combined installed capacity of 3.35 GW, according to the national energy regulator. While prosumer projects ...

Romania has made significant strides in developing large-scale photovoltaic (PV) projects, contributing to its renewable energy goals. As of the latest data available, there are over 880 large-scale PV ...

Romanian grid operators have certified Tigo Energy's EI Residential PV and storage system, aligning with 2.2 GW of new solar capacity additions recorded in 2025.

It examines and scores six key areas: governance, incentives & support schemes, permitting procedures, energy sharing schemes, energy communities and additional measures to support solar ...

Listed below are the five largest active solar PV power plants by capacity in Romania, according to GlobalData's power plants database. GlobalData uses proprietary data and analytics to ...

The Push for Romania solar capacity The European Union's broader energy strategy has heavily influenced Romania's trajectory. As nations across the continent accelerate their shift away ...

Romania has officially surpassed 5 GW of installed solar capacity, with growth evenly split between prosumers and utility-scale projects. In the last year alone, a record 1.7 GW was added--clear ...
