

Examines the viability of three solar technologies in the United States at the state and federal levels. Collaborative effort between government, industry, and the public to compile a ...

It includes corresponding PV facility information, including panel type, site type, and initial year of operation.

Open PV Project: This dataset provides information on the installed photovoltaic (PV) systems in the United States. It includes data on the size, location, and cost of the installations, as well as ...

The USPVDB Viewer lets you discover, visualize, and interact with the USPVDB through a dynamic web mapping application.

Explore the latest solar market insights and policy updates in all 50 states and Washington, D.C. All market data is current through Q3 2025. California leads as the top solar state. With over 54 GW of ...

View an interactive map or download geospatial data on solar photovoltaic supply curves.

Description This map contains multiple layers showcasing solar infrastructure within the US. The map visualizes solar power plants, electric power transmission lines, and the photovoltaic ...

Lawrence Berkeley National Laboratory compiled and synthesized empirical data on the U.S. utility-scale solar sector. The focus is on ground-mounted systems larger than 5M AC, including ...

Click the images below to view maps of concentrating collector and tilted photovoltaic panel solar energy resources on BLM-administered lands in the six-state PEIS study area. These maps are based on ...

This data packet contains supply curves, hourly generation profiles, and a composite siting exclusion TIFF for utility-scale PV across the contiguous United States....
