

Discover why rising electricity prices make solar a great investment in 2026, even after the 30% federal tax credit expires. We break down the long-term savings.

The ITC is a one-time credit against income tax that is based on the amount invested in a facility (rather than on the amount of electricity produced and sold). The amount of the ITC for a qualified solar ...

The federal solar tax credit covers up to 30% of the cost of a system purchased before 2026. The amount you claim may reduce the amount of tax you owe.

The Solar Tax Credit, officially called the Residential Clean Energy Credit, is a federal incentive that lets homeowners claim 30% of their solar energy system costs as a credit against their ...

Find out if you qualify and learn how to claim the solar tax credit to recoup the cost of your solar installation.

With the federal credit disappearing, homeowners will need to rely more heavily on state and local incentives, financing tools and the steadily falling cost of equipment.

With a host of tax and incentive programs, there are many reasons for taxpayers to install solar power generation systems. The tax benefits can include income tax credits, breaks on ...

We'll walk you through what you need to know about the federal solar tax credit, how to qualify if installation is still possible this year, and why solar continues to make financial sense for ...

On July 4, 2025, President Trump signed into law Congress's budget reconciliation bill, H.R. 1--commonly known as the One Big Beautiful Bill. This legislation brings significant changes to ...

If you invest in renewable energy for your home such as solar, wind, geothermal, biomass, fuel cells or battery storage, you may qualify for a tax credit.
