

Now, the United States is waking up to a far more alarming possibility-not an accident, but an attack. Investigations have revealed that Chinese-manufactured power inverters installed in ...

LONDON, May 14 (Reuters) - U.S. energy officials are reassessing the risk posed by Chinese-made devices that play a critical role in renewable energy infrastructure after unexplained communication...

Recent reporting has revealed that certain Chinese-manufactured solar inverters installed across the U.S. grid contain undocumented communications modules-essentially Trojan horse ...

The U.S. has found Trojan horse communication devices in Chinese-made solar power inverters. Inverters are used to change DC power from solar panels/battery racks, into AC power for ...

This investigative article exposes the discovery of undocumented communication devices hidden in Chinese-made solar inverters, creating unprecedented vulnerabilities in global power grids.

The Chinese embassy in Washington dismissed reports on devices in solar panel inverters, accusing officials of "distorting and smearing China"s infrastructure achievements."

Recently, some foreign media reported that the micro inverters produced and sold by Deye Co., Ltd., a Chinese inverter manufacturer, encountered a certification fraud crisis.

This homeowner was left in the dark by his solar company and was stuck with a bad inverter for over a year! They kept giving him the run around and was stuck with a non operational ...

These Trojan Horse devices can be turned on and controlled remotely and can be used to destabilize public energy grids, potentially leading to massive blackouts like the recent one in Spain.

China is the world"s largest exporter of power inverters, which connect renewable energy sources to electric power grids. The inverters are considered the "brains" of devices such as solar ...
