

In this work, the costs for the initial capital expenditures (CAPEX) and the operational and maintenance expenditures (OPEX) of the considered technologies were included in the LCC ...

This study critically examines the ecological and techno-economic performance of mechanical, electrochemical, hydrogen, and thermal ESS. The findings indicate that, due to ...

This review provides a systematic overview of environmentally benign MnO₂ syntheses and representative applications in various electrochemical storage devices including metal-ion ...

This paper draws on the whole life cycle cost theory to establish the total cost of electrochemical energy storage, including investment and construction costs, annual operation ...

The useful life of electrochemical energy storage (EES) is a critical factor to EES planning, operation, and economic assessment. Today, systems commonly assume a physical end-of-life criterion, ...

However, the commercialization of the EES industry is largely encumbered by its cost; therefore, this study studied the technical characteristics and economic analysis of EES and presents ...

The choice of electrochemical storage system is highly dependent on the specific requirements of the project that is being considered, the associated upfront capital and lifetime ...

This study presents a probabilistic economic and environmental assessment of different battery technologies for hypothetical stationary energy storage systems over their lifetime, with a ...

We combine life-cycle assessment, Monte-Carlo simulation, and size optimization to determine life-cycle costs and carbon emissions of different battery technologies in stationary ...

This paper provides a comprehensive overview of the economic viability of various prominent electrochemical EST, including lithium-ion batteries, sodium-sulfur batteries, sodium-ion ...
