

Every solar panel and battery connected to the U.S. energy grid relies on a device few people ever consider: the power inverter. In May of 2025, U.S. experts found undocumented ...

Discover how the ongoing trade war impacts solar products, influencing costs, supply chains, and global clean energy adoption trends significantly.

U.S. trade officials finalized steep tariff levels on most solar cells from Southeast Asia, a key step toward wrapping up a year-old trade case in which American manufacturers accused...

The updated reciprocal tariffs effective April 2025 have led to notable price increases for solar panels, inverters, and batteries in the U.S., particularly for products imported from Asia.

The escalation of the U.S.-China trade war, marked by the imposition of a 125% tariff on Chinese imports, is set to have a pronounced impact on the solar industry, particularly affecting the ...

The so-called "solar trade wars" are reshaping the entire industry, determining which countries dominate manufacturing, who pays more for panels, and how quickly renewable energy ...

The U.S. solar industry is experiencing significant shifts due to recent tariff implementations. President Donald Trump announced "Liberation Day Tariffs" in April 2025, ...

Roth's contacts further warned that developing projects that don't have solar modules, trackers and/or inverters secured inside the United States are now at risk for being halted.

In November, solar power inverters in the U.S. and elsewhere were disabled from China, highlighting the risk of foreign influence over local electricity supplies and causing concern among ...

The U.S. government recently raised alarms about potential security risks in imported solar inverters. This has made "solar independence" not just an economic issue, but also a national ...
