

At the heart of the WindRunner is cutting-edge aerospace engineering. This purpose-built cargo plane is designed to transport the world's giant wind turbine blades and pushes the boundaries of size, ...

But you won't find any cramped airplane seats or flight attendants carts within that space. In fact, you probably won't see any humans in the "cabin" at all. Instead, all of that open space was...

Called WindRunner, and expected by 2030, it'll haul just one thing: massive wind-turbine blades. In most parts of the world, onshore wind-turbine blades can be built to a length of 70 meters, ...

Radia, founded in 2016 by aerospace engineer Mark Lundstrom, aims to address this challenge through WindRunner, an aircraft purpose-built to transport the world's largest wind turbine ...

Radia, a Colorado-based energy startup, introduces the WindRunner, the largest airplane designed to transport massive wind turbine blades, revolutionizing renewable energy transportation.

Transporting wind turbine blades by air could help super-size the ...

The WindRunner can carry two blades of up to 95 meters or one blade of up to 105 meters, and can land on a temporary runway or other facility at the wind farm to transport the blades ...

But a growing challenge has emerged: transporting these colossal wind turbine blades. Enter the WindRunner, a revolutionary aircraft designed to be the world's largest cargo carrier, ...

Radia, a Boulder-based aerospace startup, is building the WindRunner, an aircraft longer than a football field, designed solely to haul massive wind-turbine blades to remote sites, says IEEE ...

Narrative Overview Modern wind turbine blades can exceed 80 meters in length, making them some of the most challenging cargo on Earth. Moving them from factory to wind farm requires...

Transporting wind turbine blades by air could help super-size the future of onshore wind farms. A giant new plane is being built to move wind turbines around the world. Set to revolutionise...
