

We combine double glass construction with back contact cells and can even customize the size, shape, and electrical configuration. Whether you need a 100W small panel for an RV or a 710W utility ...

While conventional solar panels feature a single layer of protective glass, double-glass panels utilize two layers, encapsulating photovoltaic cells in a manner that enhances efficiency and durability.

Discover how photovoltaic glass velvet technology bridges aesthetics and energy efficiency for commercial and residential projects. This innovative solution is transforming facades, skylights, and curtain walls into active ...

Velvet Premium Max helps optimise BoS and reduce LCOE since its efficiency and bifaciality generate more energy for the exact installation cost of a standard module.

Since they are transparent, double glass solar panels can be used as roofing material where partial light transmission is desired, eg, in verandas, carports etc.

Double-glass solar modules are made up of two layers of tempered glass that cover both sides of the solar panel. As snow accumulates on a typical solar panel or people stomp on it (during installation), the ...

Download catalogue and price list of Velvet plus By futurasun, glass glass photovoltaic module

The Velvet Pro range features a glass-glass structure with 144 HJT MMB half-cut cells (166 mm - M6). These cells are laminated and framed in 2094 x 1038 mm, and weight 27.5 kg. Moreover, the rated ...

Our solar panel glass comes with a specially designed pyramid pattern pressed onto the surface of ultra-clear glass, ensuring exceptional light transmittance. We also offer options for single-sided or double-sided velvet ...

In the ever-evolving world of photovoltaic technology, double glass solar modules are emerging as a game-changer. By encapsulating solar cells between two layers of glass, these modules offer unparalleled ...
