

After nearly four years of collaboration, Vietnam's rooftop solar power project in the commercial and industrial sectors has achieved significant milestones.

Vietnam is now developing a competitive bidding mechanism for solar energy to improve grid efficiency, promote competition, and ensure a stable energy supply, but it's currently in the works ...

Driven by surging energy demand, economic growth and the looming threats of climate change, Vietnam has recognised solar energy as a critical solution for securing its energy future.

Coal-heavy Vietnam is currently drafting tax breaks and other perks to persuade owners to power their buildings with solar panels, reducing both the reliance on the outdated grid and the ...

Vietnam's solar boom was built on three key pillars: foreign direct investment (FDI) (mostly from China), access to subsidised Chinese inputs, and productivity spillovers from ...

Vietnam is rapidly emerging as a regional leader in solar energy in Vietnam, driven by abundant sunlight and strong government support. Over the past decade, the country has witnessed ...

Amidst a rapidly evolving energy market in Vietnam, the expansion of solar power is driven not only by policy and investment but also by individual initiatives and novel approaches.

Explore Vietnam's booming solar power industry: growth drivers (FiT), challenges (grid congestion), key policies (PDP8), and solar panel trade regulations.

By developing domestic production capacity for solar panels, batteries, and related technologies, Vietnam could reduce import dependence while creating high-value jobs and fostering ...

The expansion of Vietnam solar energy has been largely policy-driven. Generous feed-in tariffs introduced in 2017 sparked a rush of investment, leading to one of the fastest solar buildouts in ...
