

Wind power is used on a commercial basis in more than half of all the ...

The United States is the second-largest producer of wind power, and ...

Share of wind power in electricity generation and consumption. The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear ...

The Wind Power is a comprehensive database of detailed raw statistics on the rapidly growing sphere of wind energy and its supporting markets.

Find up-to-date statistics and facts on the global wind power market.

Wind power is used on a commercial basis in more than half of all the countries of the world. [3] Denmark produced 58% of its electricity from wind in 2023, a larger share than any other country.

In 2023, wind power capacity, in terms of MW, reached 1,021 across the world, with onshore wind generating 946 gigawatts. Southeast Asia and Latin America's developing markets are ...

The United States is the second-largest producer of wind power, and generated 341.40 TWh of wind power in 2021, equal to just over 21% of total global production. Together, China and the United ...

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...

But how effective is wind power, how much are we using it, and which countries lead the way? How does wind energy compare to other energy sources, and what are its pros and cons? ...

**WORLDMETRICS REPORT 2026 Wind Statistics** Wind power grew rapidly worldwide last year, increasing its global electricity share.
