

Wind power and photovoltaic power generation exceeded for the first time

Are wind and photovoltaic power installations a new milestone in China?

Today, wind and photovoltaic power installations have reached a new level and become a new milestone in China's green and low-carbon transition.

Will China's Wind and solar power surpass coal-powered thermal power?

Beijing (AFP) - China's wind and solar energy capacity has surpassed that of mostly coal-powered thermal for the first time, the national energy body said Friday. Issued on: 25/04/2025 - 12:03 Modified: 25/04/2025 - 12:00

What is China's Wind power capacity?

A view of a wind farm in Bijie, Southwest China's Guizhou Province, on March 27, 2025. Photo: VCG
According to the latest data from the National Energy Administration, China's installed capacity of wind and photovoltaic power reached 1.482 billion kilowatts by the end of March, exceeding that of thermal power for the first time in history.

Will wind and solar power keep the lead over thermal power?

As new installations continue to grow rapidly, wind and solar capacity will maintain the lead over thermal power, the National Energy Administration said.

An aerial drone photo taken on Jan. 6, 2025 shows a partial view of the Shichengzi photovoltaic power station in Hami City, northwest China's Xinjiang Uygur Autonomous Region. ...

In the first quarter of 2025, China's wind and solar energy capacity surpassed that of thermal power, primarily coal-based, for the first time, according to the national energy body. New ...

This makes people think back to the end of 2023 when China's installed capacity of non-fossil energy power generation exceeded that of thermal power for the first time and the end of 2024 ...

China's installed capacity of wind and photovoltaic power reached 1.482 billion kilowatts by the end of March, exceeding that of thermal power for the first time in history, official data showed ...

China's solar and wind energy capacity has exceeded that of thermal energy for the first time, China's National Energy Administration said.

The future of power is clean. Getty Renewable energy has generated more electricity than coal for the first time in history, signaling a major global shift toward clean energy.

How big is China's Wind and photovoltaic power generation? China's total installed capacity of wind and photovoltaic power generation reached an all-time high of 820 million kW by the end of April. ...

Wind power and photovoltaic power generation exceeded for the first time

Its output and exports of products such as photovoltaic modules, wind turbines, and inverters all rank first globally. Over the past decade, China has helped reduce the average cost per ...

Aerial photo taken on Aug 19, 2020 shows wind turbines in Jiucaiping scenic spot in Southwest China's Guizhou province. [Photo/Xinhua] China's combined installed capacity of wind ...
